Dangers & Warnings

“A MAJOR CAUSE OF FIRES IS FAILURE TO MAINTAIN REQUIRED CLEARANCES (AIR SPACES) TO COMBUSTIBLE MATERIALS. IT IS OF UTMOST IMPORTANCE THAT THIS PRODUCT BE INSTALLED ONLY IN ACCORDANCE WITH THESE INSTRUCTIONS.”

WARNING:

DO NOT touch any part of your “Country Smoker” while the smoker is HOT. Serious bodily injury could result.

- Keep the entire grill a minimum 12 inches, or a safe distance, from all combustibles.
- Do not install or operate grill under a combustible ceiling or overhang.
- Do not enlarge burn grate orifices, igniter holes or burn pots.
- Country Smokers should be cleaned and maintained on a regular basis.
- After a period of storage, and/or non-use, the Louisiana Country Smoker should be checked for burn grate obstructions, foreign objects both inside the grill and the hopper, and air blockage, before use. See instructions in this manual for correct procedures
- Do not put a barbeque cover or anything flammable on, or in the storage space area under the barbeque.
- Children should never use your Country Smoker barbeque while unattended. Accessible parts of the barbeque may be very hot. Keep young children away while it is in use.
- Do not use lava rock, wood chunks or charcoal in your Country Smoker.
- Do not use accessories not specified for use with this appliance
- Never lean over open grill or place hands or fingers on the front edge of the cooking box or in the hopper.
- Should a grease fire occur, turn “Off” the control and leave lid closed until the fire is out. DO NOT unplug the power cord. DO NOT throw water on it. DO NOT try to smother the fire.

WARNING:

DO NOT transport your “Country Smoker” while operating or while the grill is HOT. Make sure the fire is completely out and that the grill is completely “Cool to the Touch”

- DO NOT use your grill in the rain or around any water source.
- Always unplug the grill before performing any service or maintenance .
- If the Country Smoker is stored outside during the rainy season or seasons of high humidity, care should be taken to insure that water does not get into the pellet hopper. Wood pellets, when wet or exposed to high humidity, expand greatly, break apart, and could jam the feed system.
- Disposal of ashes— Ashes should be placed in a metal container with a tight-fitting lid. The closed container of ashes should be placed on a non-combustible floor or on the ground, well away from ALL combustible materials, pending final disposal. When ashes are disposed by burial in soil or otherwise locally dispersed, they should be retained in the closed container until all cinders have thoroughly cooled.

It is a highly recommended practice to always go through the basic SET-UP Procedures after every 1 to 2 cooking's. This will ensure proper ignition, heat output and many happy grilling experiences.

Savor the Flavor!

SMOKERS**
SMOKIN' GRILLS

Dangers & Warnings

WARNING:

DO NOT over-fire your “Country Smoker”. Improper Use Can Cause Uncontrolled Fire.

FUEL—WOOD PELLETS

- This pellet cooking appliance is designed and approved for pelletized, all natural, wood fuel only. Any other type of fuel burned in this appliance will void the warranty and safety listing.
- Use only all natural wood pellets, designed for burning in grills.
- Do not use fuel labeled as having additives.
- At this time of printing, there is no “Standard” for BBQ wood pellets, although most pellet mills do use the same standards used to make “Home Heating” wood pellets. Further information on this “Standard” can be found at www.pelletheat.org or the Pellet Fuel Institute.
- Check with your local dealer on the quality of pellets in your area and for information on what can be expected from various brands.
- NOTE: Since Dansons Inc. has no control over the quality of pellets, that you use, we assume no liability caused by the quality of fuel used.

CREOSOTE

- Do Not operate the appliance if the flame becomes dark and sooty or if the burngrate overfills with pellets. Push the OFF touch pad, let the appliance cool completely, and then inspect the unit. Soot or Creosote may accumulate in the main barrel and along any air leakage or exhaust areas when the appliance is operated under incorrect conditions, such as incorrect burn grate position, blockage of the combustion fan, failure to clean and maintain the burn area, etc.
- Soot or creosote is formed when pellets are burned without the correct amount of air to fuel or incomplete combustion, thus producing a tar like substance and other organic vapours that combine with expelled moisture. The smoke will have a black color to it and the residue left behind on surfaces, will also be black in color.
- When ignited, this creosote makes an extremely hot and out of control fire, similar to a grease fire.
- If creosote has formed within the unit; allow the unit to warm up at a LOW temperature, turn OFF the appliance, then wipe out any formation with a hand towel. Creosote is similar to tar, when warmed it will begin to run, become like liquid, and is easier to clean in this state.
- Should a grease or creosote fire occurs, turn “Off” the control and leave lid closed until the fire is out. DO NOT unplug the power cord.

WARNING:

IF A UNCONTROLLED FIRE DOES OCCURE: CALL FIRE DEPARTMENT.

DO NOT: try to move appliance, try to smother the fire, or put water on the fire.

CARBON MONOXIDE: “The Silent Killer”

FOLLOW THESE GUIDELINES TO PREVENT THIS COLORLESS, ODORLESS GAS FROM POISONING YOU, YOUR FAMILY OR OTHERS:

- Know the symptoms of carbon monoxide poisoning: Headaches, Dizziness, Weakness, Nausea, Vomiting, Sleepiness, and Confusion. Carbon Monoxide reduces the blood's ability to carry oxygen. Low blood oxygen levels can result in loss of consciousness and death.
- See a doctor if you or others develop cold or flu-like symptoms while cooking or in the vicinity of the appliance. Carbon monoxide poisoning, which can easily be mistaken for a cold or flu, is often detected too late.
- Alcohol consumption and drug use increase the effects of carbon monoxide poisoning.
- Carbon monoxide is especially toxic to mother and child during pregnancy, infants, the elderly, smokers, and people with blood or circulatory system problems, such as anemia, or heart disease.

WORLD CLASS BBQ
IN YOUR
OWN BACKYARD

Dear "Country Smoker" Wood Pellet Barbecue Owner:

Thank you for choosing to purchase a "Louisiana Grill Country Smoker" wood pellet smoking' grill.

Cooking with your Louisiana Wood Pellet Grill is about to bring you full circle from the days of the caveman when cooking outdoors with wood was a necessity, to cooking indoors in your modern kitchen and now back to the great outdoors and that savory wood flavor.

Think of your "Louisiana Grill" as an extra stove available to bake, roast, grill, sear, smoke or char-grill food. Anything that can be done in your indoor kitchen can be done on your grill.

Barbecuing is a culture all on its own. Barbecuing provides a form of entertainment, which is relaxed and casual. Your meals can be completely cooked outdoors and the chef is one of the crowd. Keep it simple, be creative, and have some fun.

We'd like to take this opportunity to pass on a few **important tips** concerning grilling with wood pellets.

- **Initial set-up of your "Louisiana Grill" is the most important step** to ensure the efficient and satisfactory operation of your barbecue for many years to come.
- **Be diligent in your cleaning and maintenance program.** Taking care of your grill will add years of life and keep it looking great.
- Use only all natural wood pellets designed to burn in pellet grills.
- Ensure your pellet fuel stays moisture free. Open bags of fuel should be stored in an airtight container and empty the hopper if you are not using the grill over longer periods.

Our loyal staff, valued customers, friends and our loving families have all contributed recipes to our cookbook. We have tried to include a broad range of cuisines and styles, starting with Mom's Great Home Cooking and many, many, many, catering and entertaining experiences to current classics and new soon to be classics.

WE WANT YOU!

If you are interested in contributing a family favourite or competition winner, or any recipe, (especially if it contains bacon) please share it with us.
Fax: 1-877-303-3135, Web www.louisiana-grills.com, Email: sales@dansons.com
or Snail Mail: to the address below.

Now go, fill up the hopper, light up that grill and get ready to enjoy,
"World Class BBQ In Your Own Backyard"

Again, we want to say THANK-YOU for your purchase

Staff and Management

Safety Testing

In accordance with the procedures and specifications listed in UL SUBJECT 2728-2009 "PELLET FUEL COOKING APPLIANCES" AND CANADIAN CSA C22.2 #3 "FOR ELECTRICAL FEATURES OF FUEL BURNING EQUIPMENT". The Dansons Inc. pellet cooking appliance has been independently tested and listed by INTERTEK (an accredited testing laboratory) to UL, ULC and CSA standards.

Please read the label found attached to the inside lid of the hopper, carefully. It contains important information about installation and operation of your pellet cooking appliance.

Unpacking Your Country Smoker

IMPORTANT NOTICE

- * Be sure to inspect the entire grill after removing the protective shipping carton.
- * Report any damage to your local dealer immediately.
- * Shipping damage is not covered under warranty.

Opening the top of the shipping crate

When you opened the top of the protective shipping carton you found the unit covered in a protective cover bag, 2 protective Styrofoam fillers and a "Quality Control Checklist".

A

WARNING! Please discard the plastic bag properly and in a timely matter, as it can be dangerous and can lead to suffocation.

Tip ! Staple BOTH your "Quality Control Checklist" and your "Bill of Sale" to the inside of this Owners Manual

Quality Control Checklist (diagram B)

The team at Louisiana Grills take pride in what we manufacture and sell. This checklist is our way of ensuring every Country Smoker we make is complete when you open it.

It also contains the Model and Serial Number you will need when you communicate with your local Authorized Louisiana Grill Dealer or Dansons.

B

Removing the Country Smoker (diagram C)

The protective cardboard shipping crate makes the perfect protective material while assembling your Country Smoker.

Using a sharp utility knife, simply cut carefully down both sides of the front of the box, from top to 1/2 way down the front. This will give you easy access to remove the contents from inside of the barrel.

C

Unpacking Your Country Smoker

When you open your smoker/grill, please ensure you have and can identify all the following parts:

NOTE: Numbers following parts names throughout this manual refer to the component diagram below.

Items found in the box

1. Burn Pot— Installed and sealed
2. Burn Grate—Stainless Steel
3. Arched Flame Broiler—2pc
4. Series 3 Hopper w / igniter
Optional Grease Bucket
6. Handle Assembly
Felt Washers X 2
Locking Nuts X 2
1pc. Stainless Steel Handle
7. Porcelain Cooking Grid (s)

Items found in the parts bag

Wheels and levelers

8. 6" Diameter Wheels X 2
Wheel Axles X 2
#3 Hitch Pins X 2
Fender Washers X 2

9. Casters X 2

Mounting Hardware—Hopper to Barrel

- #10 x 16 x 1/2 Driptap Screws x 2
- mounting igniter to hopper
- 1/4" x 20-1/2" Hex Screws—Self tapping x 4
- mounting hopper to barrel

LG Hood thermometer

Assembly Instruction

INSTALLING THE WHEELS & CASTERS

Parts Included:

2 Screw-On Casters

2 Wheel Assemblies
wheel, axle,
fender washer,
and #3 hitch pin clip

Tools Required:

1/2" Wrench
Utility knife

Installation:

Step 1 Preparation (diagram A)

- Using the utility knife continue to cut the front panel all the way to the floor.
- Then lay out the front cardboard panel flat, to give you a protective surface to lay the unit on its right hand barrel end.
- Walk the smoker forward to front edge of the cardboard and then carefully tip the unit on its barrel end.

A

Step 2 Install the casters (diagram C)

The bottom portion of each leg has a threaded plate installed to allow for either the standard 2 pc caster kit or OPTIONAL 4pc Heavy Duty Caster Set (see options in rear of this manual) to be installed.

- Install the casters on legs # 1 and 2 (diagram B)
- Using your 1/2" wrench, turn each of the casters in a clockwise direction into the bottom leg plate. Turn ALL the way in. (diagram C)

B

Legs only

Step 3 Install the wheel assemblies (diagram D)

- Install the wheel assemblies on legs 3 & 4, using the bottom set of holes found on the legs (diagram B & D)
- Insert the axle through the wheel, fender washer and leg assembly
 - When Inserting the axle through the wheel hub, ensure the hub that has been cored out, is facing outward, away from the leg.
 - The wheel should be on the outside edge of the assembly, next the fender washer, and then finally the leg.
- Insert the hitch pin clip through the hole found at the end of the axle.

NOTE: You may want to remove the single 1/4" hex screw from the leg/shelf area, that may rub against the wheels.

C

Step 4 Final Check

- Carefully lift the barrel and leg assembly to the upright position.
- NOTE:** Due to differences in casters and the wheels, the unit may not be perfectly level.

D

Assembly Instruction

INSTALLING THE HOPPER & IGNITER

Parts Included:

Series 3 Hopper Assembly
Mounting hardware
2 x #10 x 16 x 1/2" screws,
4 x 1/4 x 20 x 1/2" screws

Tools Required:

Phillips & Standard
Screwdrivers

1/4" Hex Nut
Driver, 5/16"
Hex Nut Driver
Phillips Screw Driver &
Cordless Drill

Installation:

Step 1 Attaching the Igniter to the hopper:

- Carefully remove the igniter and its packaging from inside the hopper. **Diagram A**
- Using your Phillips Screwdriver and the 2 (two) #10 x 16 x 1/2" Phillips screws, secure the Igniter to the outside of the hopper. **Diagram B**

A

B

Step 2 Attaching the Grill Probe Wires:

Your Grill/Smoker comes complete with the "Digital Control Center" complete with grill probe and meat probe. The grill probe has been factory installed in the barrel, with the excess wire and connections run out through the barrel end and threaded into the auger feed hole, for shipping reasons. **Diagram D**

The wire connections to the board can be found inside or taped to the outside of the hopper. **Diagram C**

C

D

- Ensure the probe wires are run only through the large hole Located off to the right of the auger tube.**
- To connect, carefully lift the entire hopper and attached igniter, to the left hand-side of the main barrel.
- Begin by slightly inserting the igniter into the installed Burned Pot at the bottom side of the barrel. Support the hopper on your leg as you connect the two spade connections. **Diagram E**
- Carefully thread ALL excess wire, as well as the connections, back into the hopper. The wiring must not come in contact with either the fan blades, or the metal auger tube.

E

Assembly Instruction

INSTALLING THE HOPPER, IGNITER & PROBE WIRE

Step 3 Attaching the hopper to the barrel:

- Carefully lift the entire hopper and attached igniter, to the left hand side of the main barrel.
- The mounting bracket on the rear of the hopper (B) must be raised slightly higher then the receiving bracket on the barrel. (A)

Diagram A & B

- Begin by slightly inserting the igniter into the installed Burned Pot at the bottom side of the barrel.
Next slightly insert the Auger Feed tube into the correct hole.
It might be necessary to raise the hopper slightly to ensure the mounting bracket on the hopper will go over the receiving bracket on the barrel.
- Push Hopper tightly against the main barrel.
Next holding the hopper fairly level, press downward to clip the hopper onto the mounting bracket. **Diagram C & A**
- Using your 5/16" nut driver or standard screwdriver and the 4 1/4x20-1/2" hex screws, secure hopper to barrel through the holes provided, inside the barrel. **Diagram D**

NOTE: If the holes do not line up, the hopper may need to be fully clipped into place.

A

B

C

D

Assembly Instructions

POSITIONING THE BURN GRATE:

Tip ! The placement of the burn pot and burn grate is VITAL to a happy and full range cooking experience!

Confirm the positioning of the Burn Pot Diagram A

- Confirm that the back of the burn pot has been pushed tight, into the hopper and against the end wall of the grill (A & B).
- Confirm that the burn pot has been sealed with high temp caulking around the inside of the barrel end.

A

Install the Burn Grate Diagram B

- The larger lip of the grate installs under the pellet fuel deflector (A)
- The front lip of the burn grate should be sitting flush along the top of the burn pot . (C)
- The bend at the rear of the grate should also be sitting tight to the back of the burn pot. (B)

B Flame Broiler
Bracket

Barrel End

Fuel Deflector

Burn Pot

Igniter

Burn Grate

POSITIONING THE IGNITER:

Confirm the positioning of the Igniter Diagram C

It is extremely important to have the igniter and the igniter hole in the burn grate line-up.

The burn grate should not be sitting on top of the igniter or the hot rod.

It may be necessary to remove the burn grate, then gently holding onto the igniter assembly, gently lift or lower the igniter until it lines up properly.

C

Assembly Instructions

INSTALLING THE “ARCHED FLAME BROILER”:

- To ensure proper height, the bottom of the mounting bracket (A) should not be within the pellet drop chute area. If you do need to adjust the bracket, loosen off the 2 (two) Phillips screws, lift the bracket and re-tighten the screws.
- Take the Arched Flame Broiler (C) and hold it so that the end with the cut out and slots is in your left hand. The plate then clips easily over the adjustable mounting bracket. (B)
- Take the Arched Flame Broiler Cover Plate (D) and place it on top of the main piece (C). This plate is used to slide over the flame broiler opening, to open or close “Direct” flame searing.

INSTALLING THE HANDLE:

Tools Required:

3/8" Wrench

3/8" Driver
Cordless Drill

Phillips Screwdriver

Installation:

- Insert one bolt through the hole provided in the barrel hood.
- Install the felt washer on the bolt end sticking through the barrel.
- Hand thread and tighten this bolt to one of the ends of the one piece stainless steel handle. .
- Follow the same procedure to secure the other end of the handle to the barrel.
- Using a 3/8" wrench or phillips screw driver, firmly tighten both bolts until handle feels firm.

Handle

Felt

Bolt

CAUTION! DO NOT OVERTIGHTEN! Only a snug fit is required.

INSTALLING THE THERMOMETER:

The thermometer comes complete with its own threaded nut already installed on the thermometer.

- Simply spin off the threaded nut, and insert the thermometer through the hole provided in the top of the hood,
- Then firmly hand tighten the nut back onto the thermometer.

Assembly Instructions

INSTALLING THE PORCELAIN GRIDS:

- Your Country Smoker comes complete with 2 Porcelain Grids for the main cooking surface.
- NOTE: To maintain the searing and grilling performance of your grid, as well as their longevity, some special care and maintenance is required. (refer to maintenance section)

INSTALLING THE GREASE BUCKET:

Simply place the handle of the bucket into the slot of the grease drop chute (11).

NOTE: any metal bucket and any size could also be used. Ensure that the handle can safely clip into the slotted grease drop.

TIP After installing the bucket on the grease drop chute, install a #3 Hitch Pin up through the drop chute. This will secure the bucket handle and avoid those accidental grease spills when moving the grill.

HOOKING UP TO POWER:

AT HOME

- This appliance requires 110 Volt, 60Hz, 5amp service.
- It must use a 3 prong grounded plug.
- Both the "Deluxe Temperature Control" and "Digital Control Center" Oven Temp controls use a 8 amp fuse to protect the board from the igniter.

GFI Outlets

- This appliance will work on most GFI Outlets. Recommended size 20 amp.
- If your GFI outlet is highly sensitive to power surges, it will very likely trip during the ignition phase of operation. During the ignition phase, the igniter is drawing 300—700 watts of electricity which can be too much power for a GFI outlet to handle. The quality of the GFI does not matter, rather the sensitivity. Each time a GFI trips it does increase in sensitivity.

Solution: 1. Install a brand new GFI .
2. Plug the appliance into a non-GFI outlet.

ON THE ROAD

- By disconnecting the Igniter, from the main wiring harness, your Country Smoker can be run using a 12 volt , 100 watt "POSITIVE WAVE LENGTH" inverter plugged into your automobile outlet. Then light your smoker using the manual method. (found in lighting instructions)
- If you do want to continue to use the automatic igniter, it is recommended to use a minimum of a 1000 watt "POSITIVE WAVE LENGTH" inverter.

Knowledge is Power

How Your Country Smoker Works 101

- The perfect barbecue experience starts with filling your hopper (2) with all natural wood pellets.
- Press the "START" touch pad (18), this activates the "Fan" (6) which is used to cool the hopper (2), cause the pellets to burn (8) and results in convection cooking (14). It also activates the electronic Auto Igniter (7), and the pellet feed system (3,5).
- A motorized Auger Motor (5) and Metal Auger Shaft (3), deliver the pellets to the burn grate (8). Your Country Smoker uses "Top Feed" technology, which means the Auger (3,5) delivers the pellets up above the burn grate (8) and then the fuel drops into the burn grate. The strength of the auger motor (5), the metal shaft (3) and the open design reduce the possibilities of "jams" and allows for the use of less than premium quality fuel.
- Adjusting the temperature setting on the "Digital Control Center" Board (18) sets the speed of the feed, thus the temperature output. This control is fully adjustable, from hot smoke 170° F to 600° F searing and shows both "Desired" and "Actual" grill and meat probe temperature readings.
- The "Electronic Auto Igniter" (7) activates until the unit reaches 150°F, igniting the pellets in the burn grate (8).
- The Combustion / Cooling fan (6) cools the hopper (16); provides combustion air to the burn grate (8); and causes air movement in the cooking area (14), resulting in convection cooking.
- The fuel burns in the burn grate (8) hot and intense, somewhat like a forge. The fly ash is directed downward by the "Arched Flame Broiler" (12) and can be cleaned out periodically from inside the bottom of the barrel.
- A CLOSED "Arched Flame Broiler" (12) protects the food from direct contact with the flame; gives a large hot metal area to help evaporate the juices back into the cooking resulting in added flavor; channels excess grease directly to a grease pail (11); and distributes the heat evenly throughout the cooking area.
- The natural smoke flavor produced by the burning pellets, the "Arched Flame Broiler" (12) and the fan induced "Convection Cooking" (14) combine to give you the savory flavor and even cooking that is unique to pellet grills and will win you rave reviews each time you use it.

TIP Your Country Smoker Grill can run efficiently over extended periods of time and at different heat output levels, as long as the fuel supply is dry, uninterrupted and timely cleaning and maintenance is performed.

Standard Features

Powder Coat Finish

1. Hopper Lid
2. 12lb. Hopper
3. Metal Auger Feed
4. Stay Cool Handle
5. Feed Motor
6. Combustion / Cooling Fan
7. 300 Watt Electric Igniter
8. Stainless Burn Grate
9. Sealed Burn Pot

Knowledge is Power

Arched Flame Broiler

Unique Feature

All Country Smoker models come with a 14 gauge “Arched Flame Broiler”, designed to withstand high temperature and give years of performance. The Arched Flame Broiler, when closed, has been designed to keep the flame out of direct contact with your cooking surface, thus helping to reduce the chance of flare-ups. The arched design increases the amount of hot surface area to allow more fats and juices from the meats to evaporate a smoke flavor, back into meat. As well you will note the bent edges running down the length of the back and front of the angled, arched steel, these are to help in channeling the excess grease directly to the one end of the smoker where it is then allowed to collect in a convenient removable pail. The unique design also directs the majority of fly ash down toward the bottom of the barrel, while allowing for the fan forced heated air to circulate around the barrel causing convection cooking.

Sliding the Flame Broiler OPEN allows for “Direct Flame” cooking and temperatures as high as 1000 F. This is used to “Flame Kiss” or broil steaks, roasts, or vegetables.

Automatic Igniter (#7)

The 300 watt electric igniter eliminates the need for messy starter fluids or gels. It is safe and easy to start, even the little beginner “Pit Master” can start a Country Smoker. The igniter is simply a hot rod encased in a stainless steel holder. This style of igniter has been used throughout the pellet stove industry for years. The combustion/cooling fan blows air into the back of the igniter assembly, surrounding the hot rod. Then the super heated air exits through the open end, near the back of the burn grate. As the pellets begin to heat up they eventually break out in flames, this is known as spontaneous combustion. The igniter will stay activated for 7-15 minutes. If for any reason the igniter fails, you can start the grill manually.

NOTE: The igniter can be disconnected, to allow your country smoker to run with a minimum 100 watt inverter. (see manual starting procedures, further in this manual.)

Burn Grate (#8)

The burn grate is constructed out of stainless steel and is the heart of your grill. The burning temperature in the grate can reach temperatures of 1700 to 2000°F. The air holes are designed to allow the right combination of fan forced air to force the wood pellets to burn hot and clean while grilling or allow them to smolder and produce the savory smoke while in the smoke temperature. The back of the burn grate has a large oblong hole in the back to allow the hot igniter air to come through, causing the pellets to catch fire.

NOTE: The burn grate should be checked after every MAJOR use to ensure that the combustion air holes are not clogged and to ensure the igniter hole is clean.

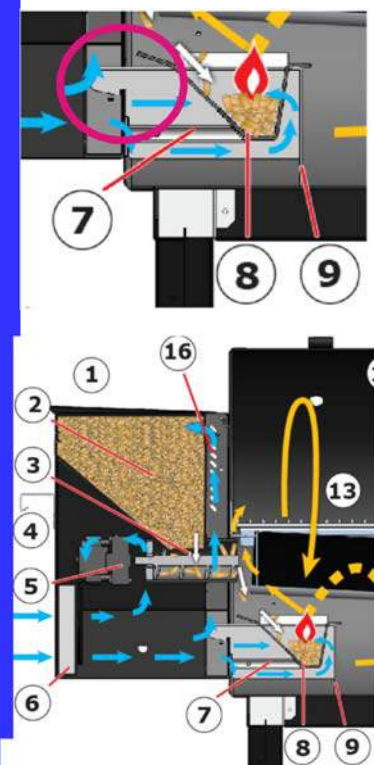

Burn Pot (#9)

The burn pot is used to hold the Burn Grate, the igniter assembly, and to channel the fan forced combustion air. The pot has been designed to be moved easily to aid in cleaning and replacement of the igniter. **It is very important that the burn pot is seated and secured properly in order to ensure proper combustion and heat output.** The burn pot needs to be pushed in tightly against the side of the barrel, and secured with a screw into the bottom of the barrel (see installing the burn pot and diagram).

Ensure that there is no foreign matter under the burn pot that may lift it off the bottom of the barrel. This will allow combustion air to leak out, thus reducing the heat output of your grill.

Auger Feed System

The heart of the feed system is a time proven, metal auger (4) and high torque auger motor (5). This combination allows for different quality of pellet fuels to be used while reducing the possibilities of “jams” taking place. The metal auger design also helps in maintaining a constant and even feed of the fuel to the fire, resulting in better and consistent temperature control. The Auger Feed System is run by a 2 rpm motor. (see control board, Digital Control Center, for further information).

Knowledge is Power

Digital Control Center

This control is very much the same as the control on your kitchen oven. The main advantages are the ability to automatically compensate for the different ambient conditions and fuel types allowing for longer, carefree bbq as well as the Programmable Meat Probe function.

Remember: Much like your kitchen oven, the ACTUAL temperature does fluctuate up and down depending on weather, the flavor of pellets being used, and the amount of food on the grill.

TEMPERATURE AGREEMENT BETWEEN INSTRUMENTS

The temperature inside of any grill will vary from location to location. Even instruments calibrated together, will not agree with each other.

ON / OFF TOUCH PAD

This pressure sensitive touch pad is used to turn the control "ON", which initiates the Automatic "START-UP" Mode. This is also used to turn the control "OFF", or activate the "SHUT DOWN" MODE.

PRIME TOUCH PAD

This touch pad performs the same function as it has with any Louisiana Grills board. Asked for from the competition cookers. When the touch pad is pressed and held, the FUEL FEED system will turn and feed more pellets to the burn grate. This can be used to add more fuel just before opening the grill lid, resulting in a quicker heat recovery time. It can also be used to add more fuel, while smoking, to increase the amount of clean smoke flavor intensity.

COOK TEMPERATURE UP and DOWN TOUCH PAD

By pressing either the UP or DOWN arrows, the LED read-out can be moved by 5 degree increments. The temperature can be set as low as 170°F, for hot smoking to a high of 600°F, for searing your steaks and hamburgers. Also used to perform the same task with the meat probe.

LED DISPLAY SCREEN

This screen is used to display temperature readouts, as well as displaying error messages, and power up readouts. Temperatures can be displayed in either Fahrenheit or Celsius.

TEMPERATURE DISPLAY

By pressing the TEMP display touch pad, the LED display screen will show and allow movement in either the "ACTUAL" temperature read out or the "SETPOINT" or desired temperature. The small LED beside both settings is used to indicate which temperature is presently being displayed.

PROBE SELECTION

By pressing the PROBE display touch pad, the LED display screen will show and allow movement in either the "GRILL" probe temperature read outs or the "MEAT" probe temperature readings. The small LED beside both settings is used to indicate which probe temperature is presently being displayed.

Programmable Meat Probe

Designed using the latest in solid state electronics, the Digital Control Center now makes it even easier for anyone to slow smoke, bake or sear like a professional "Pitmaster". Not only will the control give you the ability to set and automatically maintain your desired cooking temperature (170 °F Hot Smoke to 600 °F Searing) just like your indoor oven, but now with the addition of a separate food probe, it will cook your food to your desired internal temperature, then adjust the control to a "keep warm" temperature. Along with the true convection cooking within the grill, keeping your culinary delight from drying out, all you have to do is to set it, then relax or even sleep soundly, while the Digital Control Center will do the rest.

This screen is used to display that there is no internal (meat) probe connected to the Digital Control Center, when the meat probe selection has been selected.

Knowledge is Power

How the Board Works 101

START-UP mode

Allows electricity to flow to all the electrical components for 20 minutes. This is a software set program that will automatically start the combustion/cooling fan, the igniter and the feed system at a preset rate, until the grill probe reaches a temperature of 150°F. Once met, the igniter will shut off and the feed rate is controlled by the control board..

If for any reason the 150°F is not reached in 20 minutes, the control will turn OFF and an ER-2 will display on the screen.

SHUT DOWN mode

When finished "Savoring the Flavor", simply push the OFF touch pad. The control will turn off only the feed system, allowing the fan to continue to run not only to burn out the fuel, clean and efficiently, but also to cool down the grill. When the grill probe reaches 130°F the control will shut off completely.

Fan Cooled Hopper

The entire line of Country Smokers utilize the exact same hopper and component parts. To increase the life of your grill and its main working component parts the Combustion / Cooling fan is used to perform 3 main functions:

1. Pressurize the internal hopper compartment to cool the wiring, electrical component parts and the wood pellets.
2. Forces constant air movement between the hopper and the grill barrel wall. Because of higher temperatures needed for searing and because of the longer length of time a pellet grill can operate, such as slow smoking a whole hog, air movement is used to provide an air barrier between the two surfaces.
Ensure the air slots found on the front and back of the hopper do not get blocked off, at any time.
3. To provide combustion air, allowing the pellet fuel to burn properly. The fan forced air is then used to provide "Convection Cooking" within the smoking grill.

Powder Coat Finish

Louisiana Grills uses a "High Heat Powder Coat" finish throughout the entire line of the Country Smokers. This High Heat finish is rated for 1000°F. This is done to allow for easy and trouble free maintenance, and adding to the life of your smoking grill. Powder coating is environmentally friendly and produces an excellence and superiority of finish that customers count on. Maintaining the initial appearance of a powder coating is a simple matter. If the finish does scratch, or needs to be "freshened- up" it is important to use a touch-up paint (High Heat BBQ) to repair it as soon as possible. (see maintenance for further detail)

Grease Catcher

All Country Smokers use the "Arched Flame Broiler" system that channels any excess grease, that does not evaporate, directly to a sealed grease catch area. From here any excess grease is directed to the drop spout where it is disposed in, an easy to clean or replace, metal bucket. The metal handle of the bucket simply hooks on the notched out groove of the grease spout. Allow the grease to cool before removing the pail.

TIP: if you want to replace your grease fill bucket with a new one, save any small metal buckets that you acquire from yard candles, etc. .

Hopper Screen

All Country Smokers use a metal screen, mounted inside the hopper, to protect fingers, clothing or other objects from coming in contact with the moving metal auger. This screen can not be removed unless directed by Danson's Customer Service or authorized service personal, to perform service work.

Knowledge is Power

100% Natural Hardwood Wood Pellets

They are no thicker than the eraser on the end of a pencil. People who see them for the first time think they look like rabbit food, but there is nothing small about the heat energy or flavor in a wood pellet. These clean burning wood pellets generate about 8200 BTU's per pound with very little ash (.3lb/40lb bag) and low moisture content (5-7%) and are "carbon neutral".

Barbeque wood pellets are produced in the same matter as wood pellet fuel is produced for home heating, PFI Standard Premium Grade (see pelletheat.org). Pure raw material (sawdust) is pulverized with a hammer-mill and the material is pushed through a die with pressure. As the pellet is forced through the die it is sheared off at a specific maximum length, cooled, screened, vacuumed, and then bagged into 20 or 40 lb. bags.

BBQ wood pellets differ from smoking pellets, used in gas or propane grills, in that most bbq pellets are a combination of the main flavor and a neutral flavor. This is done because of the more intense flavor being generated when using pellets as your main fuel.

Flavor Guide Lines

Louisiana Grills is always looking for new existing blends of wood, from coast to coast.

	Beef	Buffalo	Lamb	Pork	Poultry	Fish	Vegies	Baking
Hickory	X	X		X	X	X		
Mesquite	X	X		X	X	X		
Alder	X	X	X	X	X	X	X	X
Apple				X	X	X		X
Cherry	X	X	X	X	X	X		X
Competition	X	X	X	X	X	X	X	X

Wisconsin Hickory and Maple blend 40/60

Rich, smoky bacon like flavor. Considered the "Kings of the Woods"

Georgia Pecan and Maple blend 40/60 Southeast delicate flavor.

Smokey, Bacon-like flavor. Similar to Hickory but not as strong.

Smoke House Blend

Authentic BBQ Shack flavor. Mild, savory and mouth watering.

Fruit Wood Blend

Mild, neutral, hint of sweetness.

Texas Mesquite and Maple blend 35/65

Strong, tangy, spicy flavor. Think Tex-Mex cuisine.

New England Apple and Maple blend 40/60

Smoky, mild sweetness flavor. Highly recommended for baking.

Washington Alder 100% Pacific Northwest

Mild, neutral, hint of sweetness, Used for over 100 years with salmon.

Pennsylvania Cherry and Maple blend 40/60

Slightly sweet but also tart. Gives a rosey tint to light meats.

Competition Blend

50% Maple. 25% Hickory. 25% Cherry

Perfect blend of sweet, savory and tart. Used by many professional "Pitmasters".

Tennessee Whiskey Barrel - Premium Limited Blend, Premium Price

80% Oak. 20% Whiskey Barrel

Strong, sweet smoke with aromatic tang. Perfect for red meats.

TIP

Always store your pellets in a dry area. Avoid any contact or exposure to moisture. This will cause the pellets to absorb the moisture and will result in lower BTU output or cause the pellets to swell and break apart. Use a moisture proof re-sealable tub or bucket.

Getting Started

Set Up Procedure

Please note that during shipping or moving around on your deck, some movement within the grill may have taken place, so a complete visual inspection is required. Please follow these Initial Set-Up procedures to ensure the proper and safe operation of your grill.

TIP It is a highly recommended practice to always go through these basic SET UP PROCEDURES, after every 1 to 3 cooking's. This will ensure proper ignition, heat output and many continuous happy grilling experiences.

Step 1

Open the SMOKER LID and remove the Cooking Grids (13).

Step 2

Remove the "Arched Flame Broiler" (12). Clean off any excess food drippings or grease build-up.

Step 3

Remove the Stainless Steel Burn Grate (8) and inspect the Burn Pot (9). Remove any foreign items. Ensure that the air holes in the grate (8) and the Igniter (7) are clear of debris.

Note: You can line the bottom of the barrel with heavy-duty aluminum foil. Line from left to right, starting from the burn pot area and going to the Arched Flame Broiler support. This will make clean-up and general maintenance easier.

Step 4

Re-install the Burn Grate (8). Ensure that the stainless steel grate is sitting down and snug in the burn pot (9) and that the igniter is lined up properly with the hole in the burn grate. You may have to gently lift up or down on the igniter to align with the hole.

Step 5

Re-install the "Arched Flame Broiler" (12). The larger piece of the "Arch" should be facing upward and the flame slots close to the hopper end of the barrel. This then sits on the mounting bracket and grease divider plate. The slot hooks over the moveable hanging bracket found over the pellet fuel drop area. Ensure that this mounting bracket is snug against the barrel. The second piece of Flame Broiler then fits on the top of the first and then slide "Closed". If you are cooking anything with a large amount of drippings, you may want to line the "Closed" Arched Flame Broiler with heavy-duty aluminum foil, to make cleaning easier.

Step 6

Re-install the Cooking Grids (13)

Step 7

Ensure the Grease Bucket (11) is installed, cleaned and ready to go.

Step 8

Open the Hopper Lid (1) and check for any foreign materials. Fill the hopper (2) with your choice of all natural wood pellet fuel.

Step 9

Plug it in. Start it up. Savor the Flavor !

Getting Started

With today's lifestyle of striving to eat healthy and nutritious foods, one factor to consider is the importance of reducing fat intake. One of the best ways to cut down on fat in your diet is to use a low fat method of cooking, such as grilling. Because a pellet grill uses natural wood pellets, the savory wood flavor is cooked into the meats, thus reducing the need for high sugar content sauces.

Throughout this manual you will notice the emphasis on grilling food slowly at MEDIUM temperature settings. Because of the benefit of convection cooking and the use of the "Arched Flame Broiler", your country smoker will enable you to avoid flare-ups and maximize the nutritional value of the foods that you cook.

Following is a list of the important tips that will contribute to the cooking perfection that you expect when using your Country Smoker.

Environment

As with all barbecues, the outside weather conditions will play a big part in the performance of your Country Smoker and the cooking time needed to perfect your culinary delights. Your Country Smoker, because of its single wall construction, should be considered as a 2 to 3 season grill, depending on what part of the country you live in. For greater detail on grilling and weather conditions, see the "HOT and COLD" weather tips found further in this owners manual.

Grill Placement

All Country Smokers should always be a minimum of 12 inches away from any wall behind the grill. Your grill does come with wheels or casters to make movement easier. If you are able to shelter your smoker from the wind, this will aid in temperature output, heat retention, and heat recovery time when opening the lid. Turning the smoker a 1/4 turn, keeping the smoke vent holes out of the wind, will result in better temperature output.

Operating the Grill

Initial Burn Off

Before cooking on your smoker / grill for the first time, we recommend that you "Burn Off" the grill to rid it of any foreign matter. Light and operate the grill on HIGH, or above 500°F, with the lid down, for 30—40 minutes.

Lighting your Grill

It is recommended practice to always go through the SET UP Procedures after every 1 to 3 uses. This will ensure proper ignition and many happy grilling experiences. Light as per instructions, found in this manual. If the grill fails to light, this is most likely due to a dirty or full burn grate blocking the auto igniter air passages. (refer to lighting instructions found elsewhere in this manual).

Should your auto igniter refuse to ignite the wood pellets, it is easy to light your grill manually with a match and lighting agent. (refer to manual lighting instructions found elsewhere in this manual).

Pre-Heating

It is extremely important to ALWAYS allow your grill to preheat, reach temperatures over 450°F for over 5 to 10 minutes, before cooking, each and every time. This allows the grill and cooking grids to heat up quicker; it burns off any bacteria or foreign material left over; and grill is able to maintain its cooking temperature once your food is placed in the cooking area. When you do not take the time to PREHEAT, you will find that it takes a much longer period of time to bring both the grill and food to cooking temperature.

Always PREHEAT your country smoker with the lid closed. Set your temperature control to 450°F, start your grill, and allow your grill to PREHEAT (450°F OR OVER) for 5 to 10 minutes. This gives you plenty of time to prepare your food for the grill, as well it is the final step in cleaning your cooking grids.

NOTE: After Pre-Heating is complete, set your desired cooking temperature, and leave your lid open until the actual temperature is close to your desire temperature.

Lid Position

Always cook with the lid closed. Not only does this keep the temperature even, the food will cook faster, and you will use less fuel by taking advantage of the fan forced convection cooking. A closed lid also helps to create that savory smokier flavor. You can slow down your cooking by propping up the lid using a grid lifter.

CAUTION: Grease fires are caused by not properly maintaining your grill, or failing to clean the bottom of the barrel on a consistent basis. In the unlikely event you experience a grease fire while cooking, quickly remove any food items, then close the lid. If it does not go out in a very short time, open the lid and lightly sprinkle baking soda on the fire. Be careful not to burn yourself. If this does not work, then turn OFF the control board, to stop the pellets from feeding, and shut the lid until the fire is completely out.

Getting Started

Following is a list of the important tips that will contribute to the cooking perfection that you expect when using your Country Smoker.

NOTE: The temperature readout on the control board may NOT exactly match the Dome thermometer!

Operating the Grill ... con't

Cooking Temperature Ranges

HIGH TEMPERATURES 400° F TO 600° F

The HIGH range will give an oven temperature of over 400 to 600°F (316°C), depending on the weather. This setting is used to quickly preheat your grill as well as to finish the cleaning cycles for the cooking grids and the “Arched Flame Broiler”. Could also be used as a HIGH setting in extreme cold weather conditions or if cooking with the hood open. Also can be used with the Arched Flame Broiler open to create those “Dirty or Blue” steaks as well as flame kissed vegetables.

MEDIUM TEMPERATURES 275° F TO 350° F

This range is best for baking, roasting, and finishing off that Slow Smoked creation. This range will greatly reduce the chances of a flare up, with the Arched Flame Broiler in the CLOSED position. Great range for cooking anything in bacon, or where you want control.

LOW TEMPERATURES 170° F to 250° F

The LOW setting will give an approximate oven temperature of 170 to 220°F. This setting is used to slow roast; to increase the smoke flavor; to keep foods warm; and many other savory things. Highly recommended for the BIG BIRD at Thanksgiving, Easter ham, or that huge Christmas feast.

Smoking is a variation on true barbecuing and is truly the main advantage of grilling on a wood pellet grill. There are two types of smoking: HOT SMOKING and COLD SMOKING. HOT smoking, just another name for barbecuing is generally done at 170 to 250°F. HOT smoking works best when a longer cooking time is required, such as large cuts of meats, fish, or poultry. COLD smoking is where the food is located so far away from the fire that it smokes without cooking, and at temperatures of 60 to 90°F. Your Country Smoker is classified as a HOT smoker.

Experiment with the length of time you leave for smoking, before cooking thoroughly. Some chefs, or Pit Masters as the barbecue world call them, prefer to smoke at the end of cooking and to keep the food warm until ready for serving. Remember PRACTICE MAKES PERFECT.

TIP The temperatures listed above are all approximate and will be affected by the outside temperature, the amount and direction of wind present, the length and type of pellet fuel being used and the number of times the lid is opened.

After Cooking - “Cleaning Up”

One of the greatest benefits of your Country Smoker is the minimal clean up required. When you are finished cooking and waiting just a little while to let the flavor set in that prime selection of meat, we recommend the following:

1. Using a long handle grill cleaning brush, brass or soft metal, to remove any food or build-up from the cooking grids, while it is still warm.
2. Turn the temperature control to HIGH for 5 minutes. Let the grill heat up, then push the STOP touch pad and your done.
 - The control will stop feeding pellets, but the fan will continue to burn them properly, till they burn out, and then the unit will shut down automatically in 20 minutes.
3. A quick wipe up of the powder coat surfaces, using a cloth, warm water and mild soap, will keep the unit looking like new.
4. Let the smoker cool and put your Country Smoker to bed with the optional GRILL COVER.

TIP To intensify that savory flavor, switch to hot smoke (low) temperature range immediately after putting your food on the grill. This allows the smoke to penetrate the meats, before the pores in the meat close at 120°F.

Getting Started

TIP It is a highly recommended practice to always go through these basic SET UP PROCEDURES, after every 1 to 3 cooking's. This will ensure proper ignition, heat output and many continuous happy grilling experiences.

Start-Up Procedure - Automatic

Always check the burn pot, burn grate, igniter holes, flame protector, cooking surfaces hopper and wood pellet fuel before starting or using your smokin grill.

1. Plug the power cord into a 110Volt grounded electrical outlet. DO NOT break the ground end off the cord or use a non-grounded outlet or extension cord.

NOTE: If the appliance does trip a GFI protected circuit, plug appliance into a surge bar first, then into the wall outlet.

2. Open the hopper lid. Ensure that there are no foreign objects in the hopper or feed system. Fill the hopper with dry, all natural, flavored wood pellets.

3. Press the ON/OFF touch pad.

The "START UP" mode will begin

The FEED SYSTEM will begin to feed fuel at the preset software rate, the igniter will begin to "glow" and the fan will begin to operate.

The START UP mode is timed to last 20 minutes or until the appliance reaches an operating temperature of 150°F.

4. Press the DISPLAY touch pad to display the SETPOINT.

5. Using the UP ARROW set the beginning temperature to over 500°F.

NOTE: Always allow the grill to PREHEAT before adjusting the temperature to the desired output

6. After allowing the grill to PREHEAT use the arrow touch pads to adjust the temperature to the desired temperature.

TIP: When reducing your desired temperature to a lower setting, it is highly recommended to lift the lid until the ACTUAL temperature is relatively close to the new DESIRED temperature.

Start-Up Procedure - Manual

1. Plug the power cord into a 110volt grounded electrical outlet. DO NOT break the ground end off the cord or use a non-grounded outlet or extension cord.
2. Open the hopper lid. Ensure that there are no foreign objects in the hopper or feed system. Fill the hopper with dry, all natural, flavored wood pellets.
3. Remove the cooking grids, flavor guard system and the U shaped flame guard (if equipped with one) to expose the burn grate in the bottom of the unit.
4. Place two generous handfuls of pellets into the burn grate.
5. Squirt gelled fire starter, or other approved pellet starter, into the burn grate over the top of the pellets.
6. Light the starter using a long fireplace match or long lighter.
WARNING: NEVER ATTEMPT TO ADD MORE STARTER INTO A FIRE THAT IS ALREADY BURNING OR INTO A HOT BURNGRATE. YOU COULD EXPERIENCE A BURN BACK AND YOU COULD GET SERIOUSLY BURNT.
7. Allow the STARTER to burn for 3 to 5 minutes.
8. Carefully replace the flame guard (if supplied), the flavor guard and cooking grids.
9. Follow STEPS 3 to 6 found in AUTOMATIC start-up procedures.

Getting Started

Programmable Internal Food Probe

The Digital Control Center Programmable Food Probe is the newest addition to the Louisiana Grills family and is a “must have” tool for the beginner or professional “Pitmaster”. By simply plugging the Internal Food Probe into the board, then placing the stainless steel probe into your culinary delight, and finally setting your desired meat probe temperature, not only will it cook your primal feast, to your setting, but it will automatically reduce your pit temperature to its lowest setting to keep food perfectly done, the way you like, every time. So sit back, relax or enjoy a good nights sleep and get ready to “Savor The Flavor”.

HOW TO:

PROBE PLUG-IN

Insert the 1/8" (3.5mm) audio-style plug from the food probe into this female adaptor. Ensure it is inserted all the way into the plug, you will feel and hear it snap in place. This can be plugged into the board at anytime.

CONTROL POWER ON / OFF TOUCH PAD

Press this touch pad to activate the control. Blue LED readout will light up, the fan will start, the pellets will begin to feed, and the igniter will begin to glow.

GRILL COOKING TEMPERATURE

Press the Probe Pad to “GRILL”. Press the Temp pad to “SETPOINT”. Use the Cook Temp “Up” or “Down” arrow to select your desired grill temperature From 170°F to 600°F. Press the Probe pad a second time to show Actual Grill Temperature.

FOOD PROBE TEMPERATURE

Press the Probe pad to “Meat”. Press the Temp pad to “Setpoint”. Using the Temp Arrows, “Up” or “Down” to select your desired internal food temperature. The probe can be set from 50°F to 225°F.

TIP!

Based on how long you will be away from the grill, set your desired temperature 10 to 15 degrees below your liking, as the food will continue to rise in temperature somewhat, as the grill cools, and idles at the lowest temperature.

“SAVOR THE FLAVOR”

The Digital Control Center will automatically cook your food until the “Desired” Food Probe temperature is met. The control will then automatically drop the “Grill” cooking temperature to 180°F. It will alert you by an audio “BEEP”, six times. The Grill Temperature Setpoint will automatically drop to 180°F.

TIP!

To aid in cleaning, spray the meat probe with Pam or wipe with cooking oil before using.

Getting Started

Programmable Internal Food Probe

TIP ! All our digital controls and probes do have a manufacturer +/- tolerance. It is normal for the temperature readings to be off by a few degrees.

OPERATION:

Caution:

Both the Grill Probe and the Meat Probes are made of high quality, high temperature material that can withstand high temperatures, but it is important to avoid exposing these thermocouple wires to direct flame or extremely high temperatures which can exceed their temperature ratings.

MEAT PROBE PLACEMENT

Temperature probe placement is important.

DO NOT use the meat probe when using the Flame Broiler in the open position.

The Stainless Steel end of the Meat Probe, should be inserted into the meat so that the tip is located in the thickest portion of meat.

The meat should be oriented on the grill, so that the probe wires exit the grill/smoker away from direct contact with flame or excess heat. The probe wire then can be run to the control a number of ways to aid in keeping out of direct contact with flame.

Through the barrel end,
On 2014 units.

Through the rear exhaust holes.

Through the top of
the barrel. Between
The lid and barrel.

Least Recommended:
Through the front of the grill,
Use foil protection, on main
grids.

MEAT PROBE HANGER

There are two holes, found in the hopper end handle, that can be used to place your meat probe, when not in use, or to keep the probe in a clean, protected area, until it can be cleaned and stored away.

MAINTENANCE:

1. DO NOT kink or fold the rugged stainless steel mesh protected wires, on either the grill and meat probes.
2. DO NOT roll up the wires in a tight ball. Wires should always be rolled up in a fairly large, loose coil.
3. DO NOT wrap the probe wires in foil.
4. DO NOT place the probe or wires in the dishwasher, or submerge in water. The water could get into the internal wires or connections and short out the probe. This will result in false readings. Once the probes have shorted out, there is no way to bring them back to working status, they must be replaced.
5. DO keep the solid Stainless Steel probes clean. Both the Grill Probe and Meat Probe can be wiped cleaned, after they have cooled down, with a soapy kitchen scrubby or cloth.

Getting Started

Shutting OFF Your Smoker

Your Louisiana Grills Country Smoker Pellet Grill will give you many years of flavorful service with minimum cleaning. An important step is allowing the grill and cooking grids to “Self Clean” by running the grill on HIGH or PREHEAT temperatures for 5 to 10 minutes after each use, over 450° F.

When finished cooking on your Louisiana Grill set your desired temperature to 450° F—500° F. Let your grill run for 5 to 15 minutes, depending on what you just cooked, to go through its normal cleaning method. If you were preparing meats that were extra greasy, such as anything in BACON, it is a good practice to allow the grill to burn off for an extra 10 to 20 minutes. You could experience a grease fire, but DO NOT PANIC, DO NOT UNPLUG the appliance, just leave the lid closed and let the grill burn itself out naturally. Much like a self-cleaning oven. This will greatly reduce the chances of “Flare-Up” while you are preparing your next savory meal.

When cleaning is complete, simply push the STOP touch pad. Your Louisiana Grill Control will begin its automatic SHUT DOWN or Cool Down procedure.

- The FEED system will stop feeding fuel.
- The flame will burn itself out naturally.
- The combustion / cooling fan will continue to run until the unit cools to 130° F.
- When the procedure is complete the FAN and POWER LED will turn OFF.

If you did forget to grill desert, you can press the START touch pad. If the Actual Grill Temp. is above 150°F the grill will continue to operate as normal. If below 150°F it will go through the START UP mode again.

Grill Maintenance

There are two extremes when it comes to keeping the grill clean. Those that must spit and shine the entire grill, in and out, after every use, and those whom are convinced that cleaning only takes away from that barbecue flavor. One simple rule: EVERYTHING IN MODERATION !

TIP Be diligent in your cleaning and maintenance program. Taking care of your grill will add years of life to it and keeps it looking great!

STARTING THE SEASON OUT RIGHT

A little time and effort at the beginning of the season will not only help extend the life of your grill but will also ensure the reliability of it. Making you look like the “King or Queen of the Grill”! Most of the cleaning techniques are below. Check with your local dealer, they may provide a yearly maintenance program and inspection service.

STAINLESS STEEL WORKING SURFACES

ALWAYS clean dirt and dust off all stainless steel surfaces before you begin to cook. The dirt can cook into the metal and discolor it. These can be easily cleaned with hot soapy water and a soft cloth. A quick swipe of “Stainless Steel Cleaner” and a soft rag will also work, but you must be careful not apply it to the painted surfaces or interior parts. With the popularity of stainless steel appliances increasing, there are now many commercial products made to clean and protect stainless steel surfaces.

POWDER COAT OR PAINTED SURFACES

Powder coat or Paint and maintaining these coat surfaces are not covered under warranty.

This is part of general maintenance and upkeep.

Be sure to cure your brand new Country Smoker for at least 30 to 40 minutes before using it for the first time. This allows the finish to cure properly and allows for that “NEW SMOKE SMELL” and manufacturing residue to be burned off.

DO NOT use oven cleaner, abrasive cleaners or pads on the finished surfaces.

Once installed, maintaining the initial appearance of any finish is a simple matter. The smoke and grime which builds up on surfaces from time to time contains moisture and salts which will adversely affect the powder coating and must be removed. Finish Coatings should be washed down regularly. The coating should be washed down with soapy water -- use a neutral detergent -- and rinsed off with clean water.

When powder coated items are installed without damage to the powder coating and they are maintained regularly, they should be relatively permanent. The correctly applied coating, although not metallurgically bonded to the metal should not crack, chip or peel as with conventional paint films.

NOTE: If for any reason you do experience, scratches, wearing, or flaking of the finish, both Powder Coat or Paint finishes can be touched up or repainted using High Heat BBQ Paint.

Grill Maintenance

....con't

COOKING GRIDS

When new, wash thoroughly with warm soapy water, place back in the smoker and PREHEAT the grill for 20 to 30 minutes. After the completion of grilling, open the lid and with a long handle grill cleaning brush give the grids a thorough cleaning. If you do not have a cleaning brush use long handle tongs and a balled up piece of aluminum foil wrap. Next turn the grill to "High" or "Preheat" Temperature until only an occasional wisp of smoke is seen (about 5 minutes) . This will remove most of the material that builds up on the cooking grids.

The next time you grill allow the smoker to PREHEAT for 10 to 15 minutes to complete the cleaning cycle. Give the grids a quick wipe down with your cleaning brush. Applying a thin coating of cooking oil on the grids before placing your meat on them will also decrease your cleaning time, as well as allowing to move your food easily without sticking and tearing.

THE BIG COVER-UP

Your Country Smoker will help in protecting your grill from the detrimental effects of weather and outside pollutants. As with any outdoor product, however, a cover is only as good as the maintenance given to the grill. Following the recommended maintenance included in this manual will add greatly to the life of your grill.

Helpful Hints

DO's

- Keep your Country Smoker cover clean. This is your best protection against mildew which will form on any dirt or foreign material allowed to accumulate on tops or bottoms of fabric. Use a cleaner or product that will not only clean but will also protect.
- Have any small tears or punctures repaired promptly.
- Keep away from pets.
- Keep all shrubs and vines away from your grill cover as many plants contain acids, which harm fabrics.

DO NOT

- Cover your grill while the grill is still hot
- Store anything on the top of your grill cover.
- Permit leaves, twigs or other organic debris to remain on the cover for long periods of time.
- Use high-pressure hoses or steam to clean.
- Use wire or stiff brushes , harsh detergents, abrasive cleaners or chlorine on your grill cover.

ARCHED FLAME BROILER

This requires very little work, because of its construction and type of material used. From time to time you may need to brush off any burnt leftover, such as melted cheese or that extra thick bbq sauce. The best time to clean and inspect is when you perform the initial set-up procedures after every 1 to 3 uses.

The grease channels do need to be cleaned from time to time to eliminate build-up, allow the grease to flow freely to the grease catch area and to allow for easy movement of the Flame Broiler Slide Top.

THE COOKING BARREL

To start the season fresh, then maybe 2 to 3 times during the grilling season, it is recommended to remove the Arched Flame Broiler and Burn Grate. Then give the entire interior a good cleaning, de-greasing and vacuum, to remove everything that may have accumulated.

- Ensure that the grill is COMPLETELY COLD before using your shop vacuum or before scooping out and disposing of the ashes.
- You may want to use soapy hot water, a kitchen de-greaser, etc. to clean the entire inside of the barrel. This does reduce grease build-up and the possibilities of flare-ups.
- To aid in cleaning, it is recommended to line the bottom of the barrel with heavy duty aluminum foil. Start tight from burn side of the barrel and end at the grease stop area.

Grill Maintenance ... con't

SERIES 3 BURN POT

The proper seating of the Burn Pot is crucial to proper grill performance. The Series 3 Burn Pot has a solid, sealed bottom with a slot to permanently screw the pot to the barrel bottom. The main function of the Burn Pot is to channel the fan forced air into the Burn Grate, thus there is very little maintenance required. Occasionally you may either vacuum or brush out any ash build-up or burn debris that has fallen below the burn grate.

It is crucial that the Burn Pot is seated tight to the barrel side wall, tight to the barrel bottom, and is hooked and screwed in place to ensure proper placement.

SERIES 3 STAINLESS STEEL BURN GRATE

Periodically check the air holes found on the sides of the Burn Grate for any blockage or build-ups.

Using a wire brush or flat-head screwdriver, scrape off any build-up or debris. If there is extreme build-up blocking the holes, you may wish to drill the holes clean.

When re-installing the Grate confirm the proper seating in the burn pot. The grate is seated straight, igniter hole and igniter line up and there is little play from side to side in the burn pot.

SERIES 3 IGNITER The 300 watt electric igniter needs very little maintenance. Confirm that the igniter is free of debris or blockage. Also check the four (4) set screws securing the hot rod into the stainless steel casing are snug. The hot rod should be flush with the angled front end.

SERIES 3 FAN COOLED HOPPER ASSEMBLY

ALWAYS DISCONNECT THE POWER TO YOUR GRILL BEFORE PERFORMING ANY SERVICE.

There are a number of very quick checks that should be performed on the OUTSIDE of the hopper assembly:

1. Check and clean any debris from the fan air intake. Eg. Spider webs, tree fluff, etc.
2. Check and clean any debris for the air vent exhaust, found on the front and back sides.
3. Inspect and clean the fuel hopper area. The galvanized metal can be wiped down.
To aid in protecting the metal and to allow pellet fuel to slide easily, you can apply a coating of car wax.
4. Inspect the metal auger area. Check for sawdust build-up and for debris.

You can remove the 6 (six) screws securing the end panel to the hopper assembly. There are two on the front, two on the back, and two on the under side. This will allow you to perform the following within the hopper assembly:

1. Check and clean any debris within the hopper housing.
2. Check and clean any debris from the fan blades or housing.
3. Check and clean any debris from the Auger Motor
4. Visual inspection on the wire harness and all wire connections.

Upon inspection replace all screws. Hand start each screw to ensure proper threading.

GREASE CATCH AREA AND BUCKET Always be sure the grease catch area is clean and free of debris. During the warmer months empty any grease build-up on a more frequent basis to avoid it from going rancid and to avoid having any extra creatures enjoying your grill.

SLOWING DOWN . . . NOT PUTTING AWAY FOR THE SEASON

We recommend that at least once a month, while your grill is cold, that you should perform not only the above maintenance procedures, but also include the following.

1. Using a stiff vegetable brush knock-off any build-up scale on the inside walls of your grill.
2. Using an old paintbrush, brush off any ash build-up found inside the firebox, grate and Arched Flame Broiler.
3. Give your entire grill a good cleaning with a shop vac, when cool to the touch, then quick wash and rinse.
4. Finally, visually inspect the powder coat or painted finish. Touch up any scratches with the proper touch-up.

Grilling Tips and Techniques

Here are some helpful tips and techniques passed on to us from many Louisiana Grill owners, our staff, families and lots and lots of practise:

TIP:

Sauces are best applied near the end of cooking to prevent burning.

- Before preheating the grill, make sure it is safe, clean and hygienic.
- **Always preheat your grill before cooking.** Set your Desired Temperature to above 450° F setting, be sure the lid is closed and allow the grill to heat for at least 10 – 15 minutes or until the thermometer registers over 450°F.
- Wipe off all stainless steel surfaces before preheating. Dirt and food stains will cook into the surface.
- **“Mise en Place”.** Three words that are essential for master grilling. The “Mise” refers to the basic setup of ingredients and equipment you need at grill side before you start cooking.
- Ensure the ash/drip pan is clean and free from any debris and fat build-up. You may want to line it with tinfoil to speed up your clean up time.
- Always check your pellet fuel hopper for debris and to ensure that you do not run out of pellets before finishing. Use a shop vac to clean out any sawdust build-up.
- To prevent foods from sticking, you can brush or rub cooking oil on the cooking grids. If using a vegetable spray use it only before lighting the burn pot. Never spray the grill while there is fire in the burn pot.
- Sear meats and cook with the lid down for perfectly grilled food every time.
- All Louisiana Grills are designed to allow even fan forced heat circulation, so foods cook evenly on all sides. Leave at least 1” of clearance between the food and the hood for proper heat flow.
- **Grilling times in recipes are based on 70°F (20°C) weather and little to no wind. Allow more time on cold, windy days, or even for higher altitudes. Allow less time for warmer weather.**
- To get better smoke penetration into your meats, go SLOW and LOW. Meat will close its fibres after it reaches an internal temperature of 120°F.
- Foods on a crowded cooking grate will require more cooking time than just a few foods.
- Foods grilled in containers, such as baked beans, will require more time if grilled in a deep casserole rather than a shallow baking pan.
- Use long-handled tongs for turning all meats and spatulas for turning burgers and fish. Do not use a fork for turning, as it will pierce the meat allowing the flavourful juices to escape.
- Misting or Mopping are great ways to keep meat from drying out when going SLOW and LOW. A mixture of 50/50 apple juice (not cider) and water keeps the meat moist and gives it great color.
- **A smart investment to purchase would be a BBQ Mat. Because of the fan force convection cooking a mat would protect that expensive deck or patio stone from the possibility of grease stains or accidental spills.**

FOOD SAFETY TIPS AND TECHNIQUES

3

Three Basic Rules for Food Safety

1. Keep everything in the kitchen and cooking area clean.
2. Keep hot foods hot (above 140°F)
3. Keep cold foods cold (below 37°F)

We want you to enjoy healthy and safe grill cooking, so following are some hints for basic barbecue hygiene:

- Wash hands thoroughly with hot, soapy water before starting any meal preparation and after handling fresh meat, fish and poultry.
- Use a different platter and utensils for the cooked meat than the ones you used to prepare or transport the raw meat out to the grill. This will prevent cross contamination of bacteria.
- Use a different utensil for each marinade or basting sauce to prevent cross contamination.
- Do not leave hot foods out of refrigeration for more than two hours.
- Cooked foods and salads should not be left out in the heat for more than an hour. Fill a deep tray or casserole dish with ice to keep salads cool and safe.
- Do not defrost meat at room temperature or on a counter top. Thaw under refrigeration.
- Marinate meat in the refrigerator. Bacteria are living organisms that grow and multiply rapidly in warm, moist foods.
- A marinade should never be saved to use at a later day. If you are going to use it to serve with your meat, be sure to bring it to a boil before serving.
- Always use a meat thermometer to determine the internal temperature of the foods you are cooking. **Wood smoke turns meat and poultry pink. The pink band is a smoke ring and is highly prized by the true "Pit Masters".**
- It's a good idea to put grilled food onto a heated platter, to help keep the food warm. Steaks benefit from resting for several minutes before serving. It allows those delicious juices that were driven to the surface by heat to ease back to the center.

Grilling Tips and Techniques

COLD WEATHER COOKING

Just because the bright coloured leaves are gone and the golf clubs are put away for another season, doesn't mean you have to stop barbecuing. The clean crisp fresh air, the heavenly aroma of flavoured wood pellets and food cooking, may be just what the doctor ordered to cure those winter blahs. Holiday grilling also frees up your oven space for other important menu items. Following are a few suggestions on how to enjoy your grill throughout those cooler months:

Remember: Because of the cooler temperatures your SMOKER will not produce the high temperatures you experienced in warmer weather. Use the FLAME BROILER to achieve the same steak house sear marking. KEEP WATCH !!

ORGANIZE – Get everything you require ready in the kitchen before you head out to the great outdoors. Put what you need on a tray, bundle up tight, and “get it done!” During the winter move your grill to an area that is out of the wind and cold. Check local bylaws regarding the proximity of your grill in relation to your home and/or other structures.

Caution: Never grill in an unventilated area!

To help maintain the heat, wrap a couple of bricks in foil, and place on the right hand side of the grill. Be careful not to place the bricks up tight against the barrel. This will effect both the convection air flow and burning of the pellets.

To help you keep track of the outside temperature, you should place an outdoor thermometer close to your cooking area. This will help in determine how long it will take to cook your food.

You may want to keep a log or little written history on what you cooked, the temperature outside, and the results. This will help latter down the road to help you determine what to cook and how long it will take.

When cooking in cold weather, it is better to increase your pre-heating time by at least 20 minutes.

Avoid lifting the grill lid any more than necessary. Cold gusts of wind can completely cool your grill temperature. Be flexible with your serving time; add about 10 – 15 minutes extra cooking time each time you open the lid.

As always, use a meat thermometer to determine the internal temperature of your foods.

Because the nights come sooner in the colder months, it is a good ideal to work in a lighted area or to have a light or flashlight close by.

Have a heated platter and maybe a cover ready to help keep your food warm while making the trip back inside.

Some of your better foods for winter cooking are those that require little attention, like roasts, whole chicken, ribs, and turkey. Make you meal preparation even easier by adding vegetables and potatoes.

HOT WEATHER COOKING

Following are a few tips on hot weather cooking. As it gets hotter outside, not only will the cooking times of your food decrease but the cooking time on yourself decreases. Proper dress is a must. Shorts, T-shirt, shoes, hat, apron and a generous slab of suntan lotion go without saying. Don't forget the big tall cool drink; we don't want the chef to become dehydrated.

ORGANIZE – You don't have to serve a huge seven-course meal. You don't want to be cleaning your entire kitchen after every meal. Timing is everything to cooking outside and remember practise does make perfect. So practise lots and EXPERIMENT!!!

Adjust your cooking temperatures downward. This helps to avoid those unwanted flare-ups.

As always, use a meat thermometer to determine the internal temperature of your foods. This helps in preventing your meat from over cooking and drying out.

Even in hot weather, it is still better to cook with the lid of your grill down.

You can keep foods hot by wrapping them in foil and placing them in an insulated cooler. Stuff crumpled up newspaper around the foil and this will keep food hot for a good 3 to 4 hours.

Try to keep your menu on the lighter side. So you can enjoy the warm temperatures and quality family times.

Grilling Tips and Techniques

COOKING FOR A CROWD

TIP

The number one rule for cooking for a crowd is PLANNING! The second would be to use only tried and proven recipes. Grilling should be fun and stress free. Leave new recipes for your everyday cooking.

- Planning includes not only a menu, but also the complete party. Chairs, tables, dishes, utensils, entertainment, and planned or unplanned weather conditions. Rented beverage coolers, extra tables and chairs, or maybe even a tent may be added conveniences to consider.
- Select menu items that can be completely or partially prepared in advance – salads, condiments, casseroles, breads, baked goods, and smoked meats. Try smoking a turkey the day before for big event. A turkey will pick up more of the smoke flavour after sitting in the refrigerator over night and because of the convection cooking of your grill the meat will be just as juicy as if done straight of the grill.
 - Roasts, ribs, pulled pork, brisket, even chicken, can be smoked ahead of time, and reheated or finished off the day the crowd shows up.
- Grill “time proven” classics such as burgers, chicken pieces, hot dogs or sausages – all great tasting and easy to grill, the day of.
- Make a list of every food item you will be serving so that nothing will be forgotten in the rush, right down to the butter for the buns. Also this way, those guests that what to “help” can be productive as well.
- Working backward from a planned serving time, decide when to start cooking each food so that everything is ready at the right time or even before. Make a schedule for cooking foods on the grill, plus any indoor cooking.
- Plan for a serving dish and utensil for each food item and have those items ready. Heavy-duty paper plates come in many attractive colors and patterns and will save dishwashing later. Paper or plastic beverage cups are a must if having any little ones, or young at heart, around.

TIP!

To cut down on dishwashing and using every cup in your cupboard, purchase plastic or styro-foam cups. Have your quests create their own personalized decorated cup using markers, crayons and a little creativity.

- Grill the meat or entrée at the specific recipe temperature, making adjustments with vegetables, side dishes and breads if necessary.
- Better yet, let everyone lend a hand, you supply the ingredients for “Make Your Own” meat or desert style Kabobs, and have your guests bring a favourite side dish. Serve buffet, and have a great time at your own party!

Grilling Tips and Techniques

BAKING TIPS

What is baking?

Baking is simply, a cooking technique in which dry heat is applied to a food product in a closed environment, such as an oven. Just like your oven, one can nearly bake anything on a Louisiana Grill, breads, biscuits, cookies, cinnamon buns, almost anything, especially wood-fired pizza.

Your Louisiana Grill combines the consistent dry heat of wood pellets, continual fan forced air movement and even heat distribution to give you the perfect baking environment in your grill. The environment outside your grill, ambient temperature and winds, will have an impact controlling the time and temperature. Your dome thermometer is a good way to gauge your temperature, but a more accurate way is to use an actual "Oven Thermometer" you place inside the grill or in your oven, to measure the actual baking temperature within the grill.

Smoke Flavor?

You control the flavor. Not everything has to have that savory smoke taste. Pellets burn with a "Clean Smoke" as compared to cooking over charcoal and/or stick wood, that produce a "Dirty Smoke" or fire-pit taste.

There are two basic ways to control the flavor:

1. **The flavor of the wood pellets.** A mild flavor, such as Apple, or Maple would be a better choice than Hickory or Mesquite.
2. **The length of cooking time.** Because baking is usually done at 350°F or higher, the length of time your sinful delights are exposed to any smoke is minimal, therefore it is not exposed to the smoke for a long period of time.

14

TOP 14 TIPS

- Read through the entire recipe several times & gather ALL the ingredients.
- A recipe is only as good as the ingredients that are used to make it!
- Wash hands for 20 seconds (before starting, when returning to food) with warm water and soap.
- Pre-measure the flour and other ingredients. This is called "Mis en Place".
- Measure dry ingredients using a dry ingredient measuring cup or spoon.
- Measure liquid ingredients using see-through liquid measuring cups at eye level.
- Use the appropriately sized baking pans & properly prepare them.
- Preheat the grill and use an oven thermometer. Get to know your grill and how it acts.
- Carefully follow each mixing step in your recipe. Do not over or under mix.
- Don't crowd the grill. Avoid opening the grill hood during baking.
- Pay special attention to baking times. Let your eyes and nose be your guide.
- Cool baked goods thoroughly before serving or storing.
- Finishing touches. Presentation is not everything, but it does go a long way to first impressions. It has been said that we eat with our eyes.
- Store baked goods properly.

TIP Because your cooking grids are designed to hold heat, place a wire rack or a cookie sheet turned upside down, between the cooking grids and your baking pan. This helps to insulate the bottom of your baking from burning.

Trouble Shooting

Trouble Shooting Digital Control Center

Proper cleaning, maintenance and the use of clean, dry, quality fuel will prevent common grill operational problems. However, when your Louisiana Grill is simply operating poorly or not at all, the following trouble shooting tips may be helpful.

The following is not an exhaustive list. For more details or updated information, please check our website www.louisiana-grills.com and click on customer support, contact your local authorized dealer, or contact Dansons Customer Service at 1-877-303-3134.

Our service department is available to talk with you live **Monday to Friday, 8am to 5 pm Mountain Time.**

DO NOT RETURN the appliance without calling Dansons Customer Service for assistance.

WARNING: Always disconnect the electrical cord prior to opening the inspection plate of your grill for any inspection, cleaning, maintenance or service work.

NEVER perform any inspection, cleaning, maintenance or service on a **HOT GRILL**

Problem	Cause	Solution
Control Will Not Turn ON	• Grill is not properly plugged in	• Ensure all wire connections are firmly connected • Ensure grill is plugged into a working GFCI outlet
	• The circuit board fuse has been tripped	• Fuse (5 amp.) must be manually replaced. (see board diagram at the end of this section)
	• The GFI outlet has been tripped	• Ensure all wire connections are firmly connected and dry • Ensure GFCI is minimum 10 amp service.
Temperature Readout In Wrong Measurement	• The temperature setting switch not set correctly	• Grill must be unplugged from power source. Remove access end of the hopper. Remove control board. Switch temperature slide, located on the rear of the board, to desired temperature readout.
“ER-1” Error Message	• The grill has overheated, possibly due to grease fire or excess fuel.	• Turn the grill off and allow to cool. Clean grill interior, remove excess pellets, and confirm positioning of all component parts.
	• Grill probe wire not making connection	• Ensure probe wire is connected correctly to control • Confirm wire connections and check for any damage
“ER-2” Error Message	• Grill has failed to reach 150° F within the allotted 20 minutes.	• Check hopper for sufficient fuel. • Check hopper for Auger Jam. • Check burn grate positioning. • Check burn grate and pot for ash build-up or obstructions • Check igniter to see if it is heating up and positioned correctly • Check fans to confirm operation and speed • In extreme cold, grill may require a second start • Check “Actual” temperature readout of grill probe. To confirm accuracy. Clean probe, if necessary.
	• Grill will not stay lit or above 150° F.	• Same as above
“noPr” Error Message	• Meat Probe not connected.	• Meat Probe not being used. • Ensure probe is inserted completely in board. • Check for pinched, kinked or broken wire.

Trouble Shooting

Digital Control Center

Problem	Cause	Solution
Actual Temperature reads 32° F	Internal Grill Probe needs cleaning	Use a soft cloth or mild abrasive sponge, along with hot water and soap to wipe clean the probe.
	Probe wire has become Wet	Use a hair dryer to dry the probe wires.
Cooling Fans will turn ON by themselves	Grill is exposed to high ambient temperature and direct sun.	The interior temperature has reach or gone over 130° F. It will not harm the unit. Place unit in shaded area. Prop the lid open to reduce inside temperature. Unplug the unit from power source.
Grill will not achieve or maintain stable temperature	Insufficient air flow through burn grate	Check the burn grate for ash build-up, obstructions and that it is seated properly in the burn pot. Ensure that both the burn grate and burn pot are seated properly with no air leakage. Check the fan for proper operation, that it is working, that the air intake is not blocked and that there is no blockage in the hopper. May need to clean fan blades. Perform a quick test. Remove cooking grids and arched flame broiler. Ensure all the above has been done, start the grill, set temperature to pre-heat and wait for 10 minutes. Check that the flame produced is bright, vibrant and is being pushed away from the hopper end.
	Insufficient or poor fuel	Check the hopper for sufficient fuel. Check fuel for size, dampness and sawdust. Press and hold the Prime button. Ensure the auger is working and turning freely. Check and clean the temperature probe
	Control Settings	Ensure control is set on Grill Probe display
Grill produces excess or discolored smoke	Excess grease build-up or general cleaning	Check and clean the interior grilling area. It is a good practice to clean and do a controlled burn off of the hidden excess grease after each large cooking of tasty greasy foods.
	Wood pellet quality	Check and clear the hopper and burn grate of moist pellets, replacing them with fresh dry pellets.
	Burn grate	Check for build-up of fuel in the burn grate
Frequent Flare-ups	Cooking temperature	Slow and Low is the way to go. Grease does have a flash point, keep the temperature under 350° F when cooking highly greasy food.
	Grease or left-over's	Check and clean the interior grilling area. It is a good practice to clean and do a controlled burn off of the hidden excess grease after each large cooking of tasty greasy foods.
	Flame Broiler	Confirm the Flame Broiler is CLOSED all the way.
Igniter Will Not Light Fire	Burn Grate	Check for proper seating Check for ash build-up or obstructions
	Igniter	Check to confirm igniter DOES NOT get hot. DO NOT TOUCH the igniter or the housing, you will get burnt. Check on placement of the igniter hot rod to the burn grate. Remove front inspection plate, ensure wire connects are tight

Limited Warranty

The “Country Smoker” wood pellet barbecue line, manufactured by Dansons Inc., carries a five (5) year limited warranty from the date of sale to the original owner only, against defects and workmanship on all steel parts, (excluding the burn grate), and three (3) years on electrical components. There is no specific warranty on the grill probe, meat probe, paint, powder coat finish, burn grate, grill cover and all gaskets or against damage caused from corrosion.

Conditions of Limited Warranty

During the term of the limited warranty, Dansons Inc. obligation shall be limited to furnishing a replacement for covered, failed components, F.O.B. point of shipment. As long as it is within the warranty period, Dansons Inc. will not charge for repair or replacement for parts returned, freight prepaid, if the part(s) are found by Dansons Inc. to be defective upon examination. Dansons Inc. shall not be liable for transportation charges, labour costs, or export duties. Except as provided in this CONDITIONS OF WARRANTY paragraph, repair or replacement of parts in the manner and for the period of time stipulated hereunder shall constitute the fulfillment of all direct and derivate liabilities and obligations from Dansons Inc. to you.

The warranty coverage begins on the original date of purchase and proof of date of purchase, or copy of original bill of sale, is required to validate the warranty.

Repair or replacement of the “Country Smoker” part does not extend the limited warranty beyond the five (5) years or three (3) year from date of purchase.

The pouring of liquids on your grill flame will void this warranty.

Dansons Inc. takes every precaution to utilize materials that retard rust by using high-temperature paint or powder coat, where advisable. Even with these safeguards, the protective coatings can be compromised by various substances and conditions beyond Dansons Inc. control. High temperatures, grease fires, excessive humidity, chlorine, industrial fumes, fertilizers, lawn pesticides and salt are some of the substances that can affect paint and metal coatings. For these reasons, the limited warranties DO NOT COVER RUST OR OXIDIZATION, unless there is loss of structural integrity on the grill component. Should any of the above occur, kindly refer to you Instruction Manual's maintenance section for paint finish protection. Dansons Inc. recommends that you purchase a full length protective cover, and cover your grill when not in use. Dansons Inc. also recommends the use of High Heat BBQ paint to repair or beautify your grill.

The warranties are based on normal domestic use and service of the grill and neither limited warranty coverage's apply for a grill which is used in commercial applications.

Limited Warranty

Exceptions to the Limited Warranty

There is no written or implied performance warranty on “Country Smoker” appliances, as the manufacturer has no control over the installation, operations, cleaning, maintenance or the type of fuel burned.

This limited warranty will not apply nor will Dansons Inc. assume responsibility if your appliance has not been installed, operated, cleaned and maintained in strict accordance with the manufacturer's instructions. Burning other than quality wood pellets may void the warranty. The warranty does not cover damage or breakage due to misuse, improper handling or modifications.

NEITHER THE MANUFACTURER, NOR THE SUPPLIERS TO THE PURCHASER, ACCEPTS RESPONSIBILITY, LEGAL OR OTHERWISE, FOR THE INCIDENTAL OR CONSEQUENTIAL DAMAGE TO THE PROPERTY OR PERSONS RESULTING FROM THE USE OF THIS PRODUCT. ANY WARRANTY IMPLIED BY LAW, INCLUDING BUT NOT LIMITED TO IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS, SHALL BE LIMITED TO ONE (1) YEAR FROM THE DATE OF ORIGINAL PURCHASE. WHETHER A CLAIM IS MADE AGAINST THE MANUFACTURER BASED ON THE BREACH OF THIS WARRANTY OR ANY OTHER TYPE OF WARRANTY EXPRESSED OR IMPLIED BY LAW, MANUFACTURER SHALL IN NO EVENT BE LIABLE FOR ANY SPECIAL, INDIRECT, CONSEQUENTIAL OR OTHER DAMAGES OF ANY NATURE WHATSOEVER IN EXCESS OF THE ORIGINAL PURCHASE PRICE OF THIS PRODUCT. ALL WARRANTIES BY MANUFACTURER ARE SET FORTH HEREIN AND NO CLAIM SHALL BE MADE AGAINST MANUFACTURER ON ANY ORAL WARRANTY OR REPRESENTATION.

Some states do not allow the exclusion or limitation of incidental or consequential damages, or limitations of implied warranties, so the limitations or exclusions set forth in this limited warranty may not apply to you. This limited warranty gives you specific legal rights and you may have other rights, which vary from state to state

The limited warranties for 5 (five) years or 3 (three) years are in lieu of all other warranties expressed or implied, at law or otherwise, and Dansons Inc. does not authorize any person or representative to assume for Dansons Inc. any obligation or liability in connection with the sale of the wood pellet grill. This means that no warranties, either expressed or implied, are extended to persons who purchase the product from any one other than Dansons Inc. or an authorized Louisiana Grills Dealer.

Procedures for Warranty Service

Call your nearest “Country Smoker” dealer for repair or replacement of your “in-warranty” parts.

Be prepared to furnish the following information:

1. Copy of the bill of sale.
2. Purchaser's name, model and serial number of grill and date of purchase.
3. An accurate description of the problem.

THIS LIMITED WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS AND YOU MAY HAVE OTHER RIGHTS, WHICH VARY FROM STATE TO STATE

SERIAL NUMBER AND MODEL NUMBER

YOUR SERIAL NUMBER AND THE MODEL NUMBER OF YOUR “COUNTRY SMOKER” CAN BE FOUND ON THE INSIDE OF YOUR HOPPER LID. BE SURE TO RECORD THESE IN THE SPACE PROVIDED BELOW TO AID YOU IF THEY GET DAMAGED OR LOST.
