IRONSTRIKE PROOF OF FIRE SWITCH H5887 INSTALL INSTRUCTIONS

How to install

1. Make sure that your stove is unplugged.

2. Open/remove the wiring access panel. This can be on the side or rear of the stove.

3. Locate the switch inside the stove. The switch is located where the combustion blower is mounted, on the blower housing.

4. Loosen the two contact points for the wires on the switch and remove the two fork connectors using a flat head screwdriver.

5. Remove the two hex screws that hold the switch to the housing using a 1/4" socket wrench to remove the old switch from the exhaust housing.

6. Install the new switch to the housing. If your new switch does not have screws for connecting the wires, use the screws from the old switch

7. Reconnect your wires. It does not matter which wire goes on which terminal.

8. Close/reattach the wiring access panel.
